

## Cleaning Instruction

### During Season Care:

- Before cleaning, be sure to turn off and unplug the unit.
- Keep the fan clean. Carefully wipe the unit with a soft, damp cloth. Please be very cautious near the motor.
- DO NOT immerse the fan in water and never allow water to drip into the Motor Housing.
- Never use gasoline, benzene or thinner. This will damage the surface of the unit.
- After cleaning, be sure to completely dry the unit with a cloth or towel.

### After Season Care:

- Your fan can be stored in the off-season.
- Before putting the fan in storage, clean it thoroughly, cover it with a vinyl bag, and store it in a cool and dry place. We recommend using the original (or appropriately sized) box.

## SETTING UP

- Carefully remove your fan from the box (please save the carton for off-season storage).
- Make sure the unit is in the OFF position before plugging the unit into the outlet.

## OPERATING

1. Plug the power cord into any standard 120V AC, 60HZ outlet. Please make sure the Selector (Speed Control) is in the OFF position. A loose fit between the AC outlet and plug may cause over heating of the plug. Have a qualified electrician to replace the old outlet if the power cord feels extremely hot.
